PROFESSIONAL SUMMARY

Data Engineering Specialist with a Computer Engineering degree, an MBA in Artificial Intelligence, Data Science and Big Data, and three years building and operating production data systems on Google Cloud Platform. I own a construction group's data stack end to end: Python and BigQuery ingestion from ERP, REST APIs, files and spreadsheets, idempotent loads, source-vs-target validation, shared telemetry and freshness monitoring, and the executive analytics platform the directors read themselves. I also put LLMs into production where they pay off (Gemini on Vertex AI as a document judge, RAG over internal procedures). Strong SQL and Python, documentation-first and ownership-driven. Fluent written and spoken English (C1).

TECHNICAL SKILLS

Cloud (GCP): BigQuery, Cloud Storage, Cloud Run Jobs, Cloud Scheduler, Vertex AI, IAM and Service Accounts, Docker

Pipeline Reliability and Monitoring: structured execution logging and telemetry, freshness and staleness checks, idempotent (non-append-blind) loads, source-vs-target reconciliation, automated alerting, incident root-cause analysis, runbooks

Programming: Python (Pandas, NumPy, scikit-learn), advanced SQL (CTEs, window functions, UNNEST, nested/JSON), Bash, TypeScript

Data Modeling and Governance: layered modeling (staging, intermediate, marts), dbt, dimensional modeling, partitioning, documented grain, column-level descriptions and data dictionaries, data quality checks

BI and Dashboards: Power BI, Looker / LookML, ECharts (Next.js/TypeScript analytics apps), advanced Excel, executive KPI reporting

Integrations and APIs: REST API data extraction, Sienge ERP, Microsoft Graph API, Notion API, JSON and semi-structured payloads

AI and Machine Learning: Google Gemini via Vertex AI, RAG, LLM-as-judge, prompt engineering, BigQuery ML, supervised classification, time series and anomaly detection

Collaboration: Git, GitHub, technical documentation, cross-functional work with directors, finance, procurement and IT

PROFESSIONAL EXPERIENCE

Quadra Engenharia | Data Engineering Specialist

06/2025 - Present

- Promoted to Data Engineering Specialist in 09/2026 (Data Analyst since 06/2025). I own the company's data platform end to end, from ingestion to the dashboards the directors use.
- Built and operate production data pipelines on GCP (Python + BigQuery) ingesting ERP, REST API, Cloud Storage and spreadsheet sources, with idempotent loads and source-vs-target validation enforced before any number is published.
- Designed shared telemetry for 9 bots and freshness monitoring for 53 data sources in a dedicated BigQuery dataset, so delays and failures surface before they reach business reports.
- Detected and diagnosed a stalled upstream job that had frozen 26 warehouse tables unnoticed; escalated and drove the fix with the platform team, then added freshness guard-rails so downstream apps refuse stale data.
- Built an accounts payable audit bot with 14 rules, a human QA gate and one report per owner. Coverage grew from 2 to all 32 group companies and false positives fell from 58% to 34%.
- Built Quadra One, an executive analytics platform (Next.js + TypeScript + ECharts) with 51 pages, corporate sign-in and role-based access on live BigQuery data, presented to more than 50 people across the company.
- Integrated Google Gemini (Vertex AI) as an LLM-as-judge in financial document reconciliation and shipped a RAG assistant over internal procedures on Cloud Run, both with execution telemetry.
- Containerized and deployed batch workloads to Cloud Run Jobs with Cloud Scheduler, including dependency pinning after a major-version upgrade broke only in the cloud, reproduced locally in Docker.
- Ran exploratory analyses that exposed resource-allocation inefficiencies, contributing to a 15% cost reduction in engineering projects.

Nexar | Data Analyst

03/2025 - 06/2025

- Collected, cleaned and structured industrial sensor and time-series data, building processing pipelines for analytics and model training.
- Prototyped and validated supervised machine learning models (scikit-learn) for early equipment failure detection (predictive maintenance).
- Delivered the analytics and visualization layer of the monitoring platform MVP, used in investor presentations.

Enacom Group | Quality Analyst

05/2022 - 05/2023

- Analyzed system logs and performance data, identifying critical bottlenecks and contributing to a 10% increase in application stability.
- Automated testing and log analysis routines in Python, improving QA process efficiency by 30%.
- Built Power BI dashboards and Excel reports on software quality metrics, supporting development roadmap prioritization.

EDUCATION

- MBA in Artificial Intelligence, Data Science and Big Data | PUC-RS | Completed 04/2026
- B.Sc. in Computer Engineering | Centro Universitario do Estado do Para (CESUPA) | Completed 12/2024

CERTIFICATIONS

- Data Engineering, Big Data, and Machine Learning on GCP (Specialization) | Google Cloud | 2026
- Preparing for Google Cloud Certification: Cloud Data Engineer | Google Cloud | 2026
- Build Batch and Streaming Data Pipelines on Google Cloud | Google Cloud | 2026
- Developing Data Models with LookML | Google Cloud | 2026
- dbt Fundamentals | dbt Labs | 2026
- Google Advanced Data Analytics | Google | 2025
- Google Data Analytics Professional Certificate | Google | 2025
- Business Intelligence Analyst | Escola DNC | 2025

LANGUAGES

Portuguese: Native. English: Advanced (C1, EF SET 70/100). Spanish: Conversational.
