PROFESSIONAL SUMMARY

Data professional with a Computer Engineering degree and an MBA in Artificial Intelligence, Data Science and Big Data, and three years building and operating production data pipelines on Google Cloud Platform. Day-to-day work is pipeline reliability: Python and BigQuery ingestion from ERP systems, REST APIs and Cloud Storage, idempotent loads, source-vs-target validation, structured execution logging and freshness monitoring that turns silent failures into alerts. Comfortable on both ends of the stack, from industrial sensor and time-series data to executive KPI dashboards. Strong SQL, Python (Pandas, NumPy, scikit-learn) and a documentation-first, ownership-driven way of working. Fluent written and spoken English (C1).

TECHNICAL SKILLS

Cloud (GCP): BigQuery, Cloud Storage, Cloud Run Jobs, Cloud Scheduler, Vertex AI, IAM and Service Accounts, Docker

Pipeline Reliability and Monitoring: structured execution logging and telemetry, data freshness and staleness checks, idempotent (non-append-blind) loads, source-vs-target reconciliation, automated alerting by email and API, incident root-cause analysis, troubleshooting runbooks and technical documentation

Programming: Python (Pandas, NumPy, scikit-learn, Matplotlib), advanced SQL (CTEs, window functions, UNNEST, nested/JSON), Bash, TypeScript

Data Modeling and Governance: layered modeling (staging, intermediate, marts), dbt (Fundamentals), partitioning, documented grain, column-level descriptions and data dictionaries, data quality and integrity checks

BI and Dashboards: Power BI, ECharts (Next.js/TypeScript analytics apps), Matplotlib, advanced Excel, executive KPI reporting

Integrations and APIs: REST API data extraction, Sienge ERP, Microsoft Graph API, Notion API, JSON and semi-structured payloads

Machine Learning and Statistics: supervised classification, regression and forecasting, time series, anomaly and failure detection, model validation, descriptive and applied statistics

Generative AI: prompt engineering without fine-tuning, Google Gemini via Vertex AI, RAG, LLM-as-judge

Version Control and Collaboration: Git, GitHub, technical documentation, cross-functional work with IT, operations and business leaders

PROFESSIONAL EXPERIENCE

Quadra Engenharia — Data Analyst, Operations

06/2025 – Present

- Built and operate production data pipelines on GCP (Python + BigQuery) ingesting ERP, REST API, Cloud Storage and spreadsheet sources, with idempotent loads and source-vs-target validation enforced before any number is published.
- Designed the monitoring layer for those pipelines: structured execution logs and run telemetry in a dedicated BigQuery dataset, making pipeline state queryable and auditable instead of silently failing.
- Detected and diagnosed a stalled upstream job that had frozen 26 warehouse tables unnoticed, plus a table dead since January still being read as current; escalated and drove the fix with the platform team, then added freshness guard-rails so downstream apps refuse stale data.
- Containerized and deployed batch workloads to Cloud Run Jobs with Cloud Scheduler (three daily runs), including dependency pinning after a major-version upgrade broke only in the cloud, reproduced locally in Docker.
- Developed and maintain BillBot, a Python compliance auditing system that cross-checks financial records in BigQuery, flags inconsistencies at the correct grain and notifies owners with traceable reports, with a QA gate and durable false-positive tracking.
- Built Quadra One, an executive analytics platform (Next.js + TypeScript + ECharts) reading live BigQuery data, delivering KPI dashboards read directly by directors with no analyst in the room.
- Integrated Google Gemini (Vertex AI) as an LLM-as-judge in automated financial document reconciliation and shipped a RAG assistant over internal procedures, using prompt engineering without fine-tuning.
- Ran exploratory analyses that exposed resource-allocation inefficiencies, contributing to a 15% cost reduction in engineering projects.

- Documented every system, validation query and troubleshooting path in Git/GitHub and an internal knowledge base.

Nexar — Data Analyst

03/2025 – 06/2025

- Collected, cleaned and structured industrial sensor and time-series data, building processing pipelines for analytics and model training.
- Prototyped and validated supervised machine learning models (scikit-learn) for early equipment failure detection (predictive maintenance).
- Ran exploratory analysis on sensor data to surface failure patterns and anomaly signatures.
- Delivered the analytics and visualization layer of the monitoring platform MVP, used in investor presentations.
- Contributed to asset structure definition and operational event modeling with the engineering team.

Enacom Group — Quality Analyst

05/2022 – 05/2023

- Analyzed system logs and performance data, identifying critical bottlenecks and contributing to a 10% increase in application stability.
- Automated testing and log analysis routines in Python, improving QA process efficiency by 30%.
- Built Power BI dashboards and Excel reports on software quality metrics, supporting development roadmap prioritization.

EDUCATION

- MBA in Artificial Intelligence, Data Science and Big Data — PUC-RS — Completed 04/2026
- B.Sc. in Computer Engineering — Centro Universitario do Estado do Para (CESUPA) — Completed 12/2024

CERTIFICATIONS

- dbt Fundamentals — dbt Labs — 2026
- Smart Analytics, Machine Learning and AI on Google Cloud — Google Cloud — 2026
- Modernizing Data Lakes and Data Warehouses with Google Cloud — Google Cloud (Coursera) — 2025
- Google Data Analytics Professional Certificate — Google (Coursera) — 2025
- Python for Data Analytics — Meta (Coursera) — 2025

LANGUAGES

Portuguese: Native. English: Advanced (C1, EF SET 70/100). Spanish: Conversational.
